News Story

Joint Seal features double-sided design.

June 8, 2007 - Featuring acrylic-impregnated cellular foam core, SEISMIC COLORSEAL-DS fills and seals interior and exterior of structural joint openings in single step while insulating and attenuating sound. Both visible outer faces are coated with low-modulus, colored silicone bellows. Eliminating screws, anchors, and embedments, material self expands and is connected to substrates by inherent active backpressure combined with pressure-sensitive adhesive nature of impregnation medium.

Emseal Introduces Breakthrough Double-Sided Joint Seal

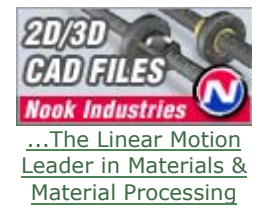

"SEISMIC COLORSEAL_DS" Seals Inside and Outside of Structural Joints in Buildings in Single Installation Step

WESTBOROUGH, MA, and TORONTO, ON - EMSEAL, the leading manufacturer of premium sealants, expansion joints and gasket products, announces its innovative double-sided SEISMIC COLORSEAL-DS movement joint sealant.

Filling and sealing both the interior and exterior of structural joint openings in a single step while simultaneously insulating and attenuating sound is the unique realm of this ground-breaking product development from EMSEAL. SEISMIC COLORSEAL-DS is uniquely suited to sealing curtain-wall systems, store fronts and entrances, as well as precast concrete parapet and spandrel panels. It is additionally ideal for sound transmission dampening in interior partitions.

SEISMIC COLORSEAL-DS features an acrylic-impregnated cellular foam core custom made to the depth of the substrates to be sealed. Both visible outer faces are coated
